

Flexiglide
Shutters
Installation at
the O2 Arena

Completed
June 2016

Security Shutters

Roller Shutter Manufacture and Installation

This was a challenging project as the ceiling height was over 4 meters with a multitude of structures such as HVAC and lighting in the way of the support for the 15m and 20m curved Shutters

The Flexiglide shutters were specified to close off 3 isolated island bars for the main O2 event holding area.

The Flexiglide solution were perfect for the job as they are horizontally driven, lightweight and are able to accommodate curves, meaning that the shutters enclosed the island bars. fully whilst also offering security and, easy operation.

"To add to the challenge, once we had calculated all the supports to the shutters, additional beer taps had been installed on the bars which caused an additional redesign before installation."
