

TWICKENHAM STADIUM

Facade Shutter
Installation as
part of East
Stand
Redevelopment

Completed
September 2018

Security Shutters

Roller Shutter Manufacture and Installation

As part of a 54 million pound refit to Twickenham stadium, HVP were specified to install 8 polycarbonate shutters to new turnstiles on two of the entries

The shutter specified was the Facade which utilises high-end polycarbonate and powder coated aluminium slats.

There was a full planning process with the architect encompassing multiple revisions to the designs to ensure the shutters fitted within the designed steel frame work

"The project was challenging because of the arc used for 5 of the shutters, which was overcome through careful consideration of the supporting angles by our engineers."
